

**Product Manager - Platform • Digital • AI • Data****☎ Phone:** 502-298-6263**PROFESSIONAL SUMMARY:**

Platform Product Manager with 5+ years building ML/AI, onboarding, catalog/metadata, payments/checkout, and data platforms across JPMorgan and Yum! Brands. I turn slow, manual, cross-team processes into scalable platform capabilities standardized definitions, automated workflows, and self-serve tools that improve speed, reliability, and adoption. On JPMorgan's Digital Banking platform (web + app) for startups and mid-market clients, I helped reduce onboarding from ~72 hours - 1 week to under 1 hour, while scaling adoption and improving quality. I lead cross-functional delivery with 18 engineers and 4 management consultants and drive outcomes through clear prioritization, governance, and metrics-driven iteration.

Core Strengths:

Platform PM • Marketplace/Seller-style Onboarding Concepts • AI-Enabled Platforms • Enterprise AI Governance • Catalog & Metadata Standard • Workflow Automation • Payment's process • Checkout/Activation • Integrations & Back-office APIs • Experimentation & Adoption • Operational Excellence • Governance & Controls • Stakeholder Leadership • Platform Intelligence

Tech Fluency:

Redshift/SQL • dbt/Airflow • Feature stores & ML handoffs • RBAC/row-level security • Observability & SLAs

PROFESSIONAL EXPERIENCE**Platform Product Manager - J.P. Morgan Chase & Co. - Payments**

Apr 2024 – Present

- Own fast-track onboarding for JPMorgan's Digital Banking platform (web + app) for startups and mid-market clients, enabling activation for Wires, ACH, RTP, and Check Deposits.
- Cut onboarding from ~72 hours—1 week to under 1 hour, reducing onboarding submission failures by 90% (pre-populated required fields + upfront validation) and lowering rework by 62%.
- Reduced workflow breakages by automating assignment and acceptance steps, improving release stability and making timelines more predictable (reduced cycle-time variance).
- Scaled adoption from 45 clients / 15 products (general adoption) to 180 clients / 45 sub-products (MVP), supporting 48 products and 15 back-office API integrations across dependent systems.
- Own the Catalog / product definition layer (fields, rules, workflow stops) that directs where data lands across platforms; made it a single source of truth for Client Onboarding systems to reduce duplicate builds and engineering spend.
- Built a self-serve, prompt-driven authoring tool that lets Product Owners create and maintain definitions/rules without engineering tickets, reducing onboarding tickets by 80% for the supported client segment.
- Enabled "publish once, reuse everywhere" by integrating definition changes with multiple onboarding platforms to keep experiences consistent across channels and teams.
- Configured automated approvals and downstream notifications when definition changes impact dependent teams, improving coordination and reducing production issues.
- Ran A/B experiments and adoption studies to improve engagement and task completion across key journeys; drive adoption through demos, onboarding, and feedback loops.
- Lead a cross-functional team of 18 engineers and 4 management consultants and drive platform usage across 1,500+ users / 68 teams globally.

Product Manager, Analytics Solutions - J.P. Morgan Chase & Co. – Product Sales

Aug 2022 - Mar 2024

- Owned the Payments sales data product end-to-end from CRM sources through landing and modeling in Amazon Redshift as a single reliable source for sales reporting.
- Partnered with CRM Product Owners to understand objects/processes; created metadata and data dictionaries, and coordinated extraction from CRM into Redshift.
- Wrote user stories for CRM/ingestion teams; once data was in the lake, collaborated with the tech team to model datasets and publish views aligned to analytics and reporting needs.
- Embedded governance with stewards (quality + lineage) and implemented RBAC/IAM + row-level security so each Line of Business accessed only its data.
- Participated in product strategy calls and translated sales data into insights that supported sales leaders and business transformation initiatives.
- Managed the Jira backlog and re-prioritized stories as needs changed to ensure the highest-value increments shipped first.
- Monitored usage and adoption continuously and guided teams to the right datasets, ensuring the data product drove product success and business impact.
- Hosted bi-weekly sessions with Analytics and ML/Data Science to clarify fields, introduce new data points flowing into the warehouse, and coordinate fixes with Tech, CRM, and platform owners for any data drops.

Product Analyst - Yum! Brands, USA

Oct 2021 - Jun 2022

- Worked as **Associate Product Manager** in Yum's digital ordering and **payments platform** across web and mobile, focused on smoother checkout and higher payment completion.
- Owned the checkout funnel view (menu → cart → checkout → payment → confirmation) to highlight drop-offs and root causes.
- Analyzed declines, timeouts, and retries by device, browser, tender type, and gateway response; turned insights into engineering priorities.
- Partnered with engineers to improve tracking/instrumentation so release impact could be measured confidently.
- Supported A/B tests and pilots for checkout improvements (error messaging, retries, saved payment/guest flow) and shared results to guide rollouts.
- Worked with Product, Design, Ops, and Risk/Compliance to balance customer experience with payments controls and reliability.
- Delivered dashboards and launch readouts that supported roadmap and sprint decisions.

Analytics Consultant - Reguss Consulting, India

Jun 2020 - Oct 2021

- Built lead-scoring models and campaign dashboards to focus sales on high-propensity clients.
- Automated pipelines using SQL, PySpark, and Airflow, reducing report turnaround time by 30%.
- Created KPI hierarchies and scorecards for marketing and sales performance tracking.
- Helped business leaders transition from manual reporting to automated analytics.

Business Development Intern – Dell Technologies - Sales

Jan 2019 - Jan 2020

- Supported sales segmentation and territory planning with TAM/SAM sizing and competitive mapping.
- Built weekly pipeline/forecast views (Excel/Power BI from CRM) to improve stage hygiene and accuracy.
- Assisted win/loss reviews, tagging reasons and surfacing pricing/packaging patterns for sales plays.
- Produced concise enablement assets battlecards, one-pagers, ROI inputs to sharpen messaging and speed deals.

EDUCATION

Executive MBA, University of the Cumberland

MS, Business Analytics, University of Louisville

B. Tech, Computer Science, Bharath University

Certifications:

AWS Certified Solutions Architect (AWS), Microsoft Azure Fundamentals (AZ-900), Microsoft Azure AI Fundamentals, Microsoft Power Platform Developer Associate, Microsoft Power Platform Solution Architect (PL-600)
